TESKA has been manufacturing high quality piece of Bathroom sanitary ware stuffs and valves products since 2005. Company headquarters moved to istanbul in 2012

The factory occupies vastly in ISTANBUL over 3.000 m² and in Adana 1.000 m² space area of strategic land in the central plain where plenteous raw materials and skilled labor accessibility are obtainable. literally employs over 60 persons composing of highly skilled craftsmanship, technicians, engineers and administrative office staffs. finest design, world class quality, supply consistency and impressive service to customer both domestically and internationally.

Our company has many patented the production of quality products so that the industry has found its place in the industry today. With the product design and technology developed entirely by giving impetus to the sector in recent years with products of their own production, industry products has brought a new perspective.

All the production and management staff works are performed with a team spirit and develops its technological investments, Our company that owns the certificate of ISO 9001:14001:18001, CE, WRASS & GOST R that is under the confirmation Quality Guarantee System conditions.

WHY **teska**

ADVANCED TECHNOLOGY

- Surface and Coatings Technology
- Thermostatic Shower Mixers
- Quick Assembly
- High Quality
- Low Cost
- The Life Cycle Assessment 50.000

ENVIRONMENTAL AWARENESS

- First Quality Calibration materials
- European Standards of Robot Coatings
- High Quality European Water Saving Adjustable Cartridge

PRACTICAL SOLUTIONS

- Prevent Splash aerator
- Secret aerator
- Stainless steel 304 quality adjustable shower pipe
- 180° Swivel Shower Head in Shower Heads.
- Select push-button on/off control
- European Tempered surface glass
- Stain-free surface mirror
- Body and height adjusting options
- Quick easy cleaning

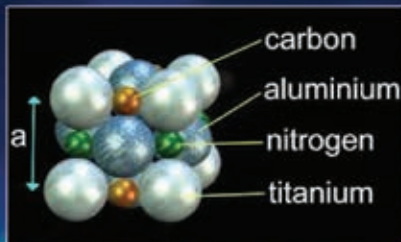

PVD TECHNOLOGY

PVD coating is optional and it is applied with extra fee

What is PVD Coating?

Physical Vapor Deposition (PVD) is a high-tech coating application, used to manufacture high-end consumer products, jewelry and medical products. The PVD coatings are hard, thin film coatings, deposited in a vacuum chamber from a physical source, as opposed to a chemical one. The coating process is performed by Sputtering, where atomized material from a solid target is transferred to the product by energetic bombardment of its surface layers by ions or neutral particles. Magnetron sputtering is an extremely flexible coating technique that can be used to coat virtually any material. Sputtering is an extremely flexible coating technique that can be used to coat virtually any material.

Advantages PVD coating with other coating systems

- 50% more corrosion protection than standard coatings
- much harder surface. much softer touch feeling
- Resistance to salt test 300 hours (200 hours European Standart)
- Extra strength to chemicals
- Long-lasting non-fading colors
- High resistance to sudden temperature changes
- 100% environmental management according to coating method

Anti-scratch

Anti-reflective

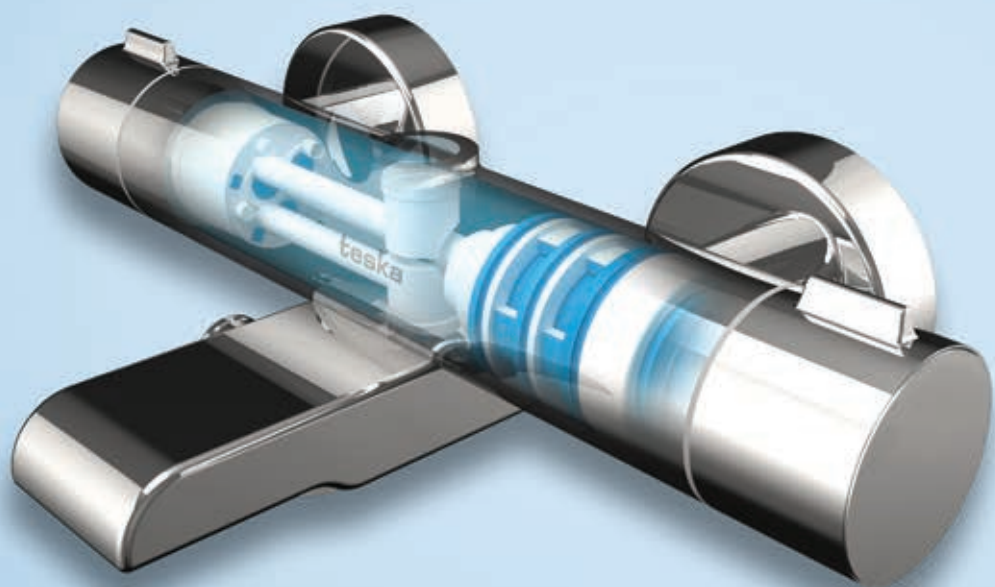

Anti-smudge

Anti-glare

COLD BODY®

COLD BODY®

teska

*Makes a Difference in
Your Bathroom*

Using Teska cold body technology prevents the surfaces of our products from heating up to prevent the danger of burning.

All of Teska thermo smart thermostatic batteries feature innovative Teska technology creates a barrier between hot water and the exterior.

Teska cold body technology is especially valuable for children who do not properly assess what they should touch and should not touch.

TERMO SMART®

What is Thermostatic shower mixer?

The thermostatic mixer maintains an exact water temperature for the duration of your shower. It protects you from any sudden changes in the water supply to the shower, so even if somebody flushes the toilet or turns on the kitchen tap the temperature of your shower will remain the same.

It is known that the washing water at 65 °C can cause third-degree skin burns (requiring medical intervention and skin plantation in the hospital) in very sensitive skin in a short period of time such as 30 salicas that it can cause. Especially children under the age of four and older people are more vulnerable to the risk of scalding in hot water because their skin is thinner than that of young and adult people. Research shows that 24% of cases of skin burns in children are caused by excessive hot water contact.

The thermostatic valve mixes the hot and cold water to your pre-selected temperature and reacts instantly to any changes in the pressure or temperature of the water supply by re-adjusting the mix of hot and cold water. If there is be a failure in your cold water supply, the thermostatic valve will automatically shut down.

What are the benefits Thermostatic shower Mixer?

- Water temperature remains constant for the duration of your shower, so there's no risk of scalding from a sudden temperature increase and no surprising shocks should the temperature plummet. Technology ensures the outer surface is never too hot to touch.
 - Teska thermostatic mixers will maintain your pre-selected water temperature, leaving you to relax and enjoy your shower. Should you wish to stop the water (e.g. to shampoo your hair), the thermostat will automatically find the exact same temperature when you re-start the flow.
 - Water temperature remains constant for the duration of your shower, so there's no risk of scalding from a sudden temperature increase and no surprising shocks should the temperature plummet.
- Install a thermostatic mixer and you can save water and energy too.

SMART FLEX®

First time in Turkey **%100** Made in Turkey,
TESKA Brand

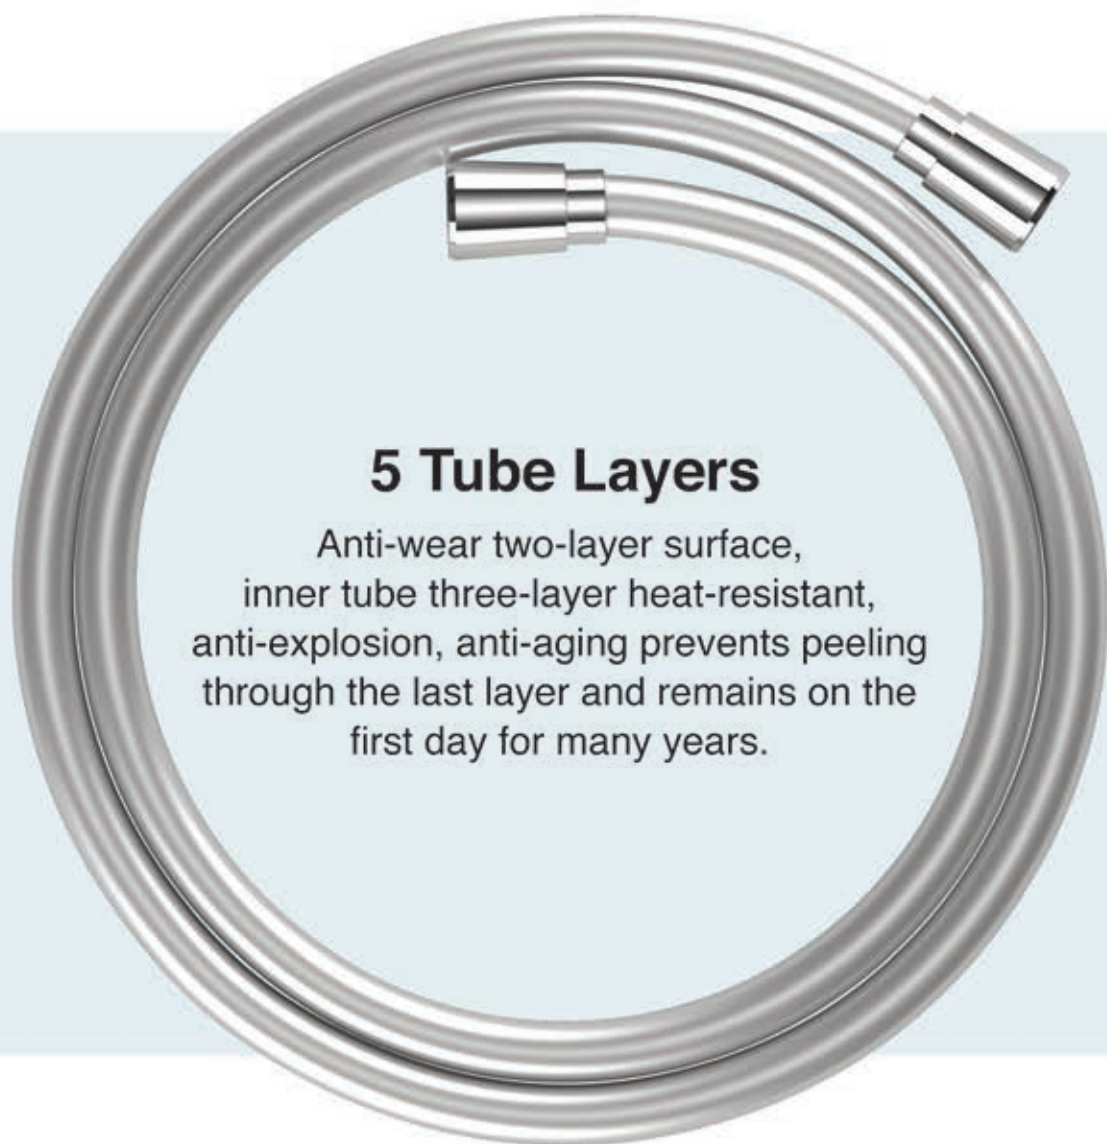

360° movable head

Gold

*The minimum order for alternative color options is 1000 pieces

5 Tube Layers

Anti-wear two-layer surface,
inner tube three-layer heat-resistant,
anti-explosion, anti-aging prevents peeling
through the last layer and remains on the
first day for many years.

SMART FLEX

PVC material high quality
shower hose

Hose Explosion-proof Replacement
360° Swivel freedom of movement
and a comfortable shower

Shower hose is 160 cm,
which is long enough

Pleasant to the touch, in smooth plastic
convenient to clean. Facilitates installation,
no need for a tool

Resistant to tensile strength due to strong
body structure

Resistant inner layer against
heat and pressure

1

Fiber intermediary weave

2

Resistant outer layer
against pressure

3

Chrome cover

4

Easy cleanable final layer
which prevents peeling

5

Cascade Flow Regulation

The best water saving. Limescale stream quality longer

Locking Collar Diverter

Continues to operate even at very low pressures (0,5 bar) due to its structural properties.

European Origin Ceramic Cartridges

The internal structure of the ceramic material is of good quality, durable and long life.

Chrome Coating

New High technology coatings extra brightness

Silicone Water Nozzles

For head showers silicone nozzles makes anti limescale, easy cleanable.

Water Saving

With a prevent splash aerator water consumption is reduced by up to 50%.

Quick Assembly

TESKA Quick assembly patented, saves time and size availability & no necessary cutting.

Key Touch

For head shower, hand shower and taps available diverter push on of button

Height Adjustment

Patented assembly no need to cut height and structure adjustment

Tempered Glass

European origin tempered glass

Thermostatic Cartridge

Perfect sensitive heat adjustment

WHAT IS THE MEANING OF PPR-C?

PPR-C (Polypropylene Random Copolymer) Standards indispensable solution for today's indoor cold and hot water piping systems has advantages such as its lightweight and smoothness, smooth and bright internal surfaces, calcification and rust-free, hygienic, easy to assembly and takes the place of galvanized pipes. Used in any kind of indoor hot and cold water pipe systems,

Moreover, it can be color and provides feature on protect odor and taste on fluid. With the favorable pressure and heat, the lifetime of PPR Pipe and fittings may be more than 50 year.

Raw material creates random chain and takes under protection. And it is deny to production of any biological material on PPR Pipe and fittings. manufactured according to standards (ISO15847-1:2013)

teska

*Makes a Difference in
Your Bathroom*

What is advantage of ppr comparing metal pipes:

- 1) Its useful life is 50 years under 20 bar pressure at 20°C.
- 2) It has high resistance against chemical substances.
- 3) Lime and seaweed-free internal feature
- 4) Perspiration and stretching does not pose problem in the systems where composite pipe heating and cooling used together.
- 5) Since no shaving is required for composite pipes, it enables fast assembly opportunity.
- 6) Has smooth and bright internal surfaces,
Heat and sound insulation
- 7) No assembly loss %70 saving
- 8) Environment-friendly.
